

2017 Epic Full Carbon Paddles

Epic is pleased to announce the new look for the 2017 Full Carbon paddle line. The new paddles incorporate a clear carbon weave shaft, new graphics on the blades and shaft, as well as a special finish on the shaft.

The new blade graphic (on both sides of the blade) has been designed to eliminate possible wrinkling, as well as look and feel integral to the blade.

For all standard models, the new shaft decal will specify the exact paddle type, blade size, and length for improved paddle identification.

The clear carbon weave shaft has also been finished to a smooth, semi matte finish for superior grip and handling.

These design updates will be seen on all Wing and Touring Full Carbon models that previously used our burgundy shaft. Our stiff shaft paddles will get the upgraded graphics, but continue to use the current blue shaft.

Flexibility of the shaft has been increased slightly to enhance paddling comfort, while still maintaining power.

Weight: 640–690g. - will vary with paddle blade style and shaft length.

The Hybrid Touring paddles and Club Carbon Wing paddles will retain their current look and continue to offer a great solution for the budget minded customer.
